

GRANDVIEW[®]

Disposable Laryngoscope Blade

SEE THE CORDS

On Your First Attempt

Improve your intubation success rate with the innovative GRANDVIEW[®] Blade. Created by an ER Physician to improve direct visualization of the cords.

The wider specially formed GRANDVIEW blade keeps the tongue out of the way and reduces the need to reposition the blade thus reducing the potential for tissue damage. The unique blade design provides a more anatomically appropriate curve which improves direct visualization.

Known as the Tongue Tamer, the GRANDVIEW blade makes it easier for you to see the endotracheal tube pass through the cords. It is an innovative EMS tool that you can always rely on under the most adverse conditions. Not affected by blood, mucous, rain or humidity.

See for yourself why EMS providers across the country have chosen the GRANDVIEW disposable laryngoscope blade as a "must have" airway management tool. The GRANDVIEW blade is the economical solution that has been shown to improve first attempt success rates.

Features and Benefits
