

Say Hello to the World's First Three-in-One BVM

Help Your Team to Get it Right

The least experienced person usually gets handed the BVM.

Now team leaders can adjust their BVM's settings for less-experienced team members before getting busy with the work that only they can do.

Watch Your Patient, Not Screens

Tidal volume trackers are nice, but they take attention away from the patient.

With the ButterflyBVM™ you can keep your head up and your focus where it is needed most.

Peace-of-Mind

It's hard to monitor rate, volume, chest rise, inspiratory time, and pressure with each squeeze of a BVM.

Let the ButterflyBVM™ lighten your cognitive load.

Tidal Volume Dial

Take the Guesswork Out of Every Breath

Volume Control

Set the volume to match patient size.

Pressure Control

Tune the pressure to meet your patient's needs.

Rate Control

Built in rate control for peace-of-mind while you focus on the patient.

The most advanced care begins with the basics – done right, every time.

Additional Butterfly BVM Product Features

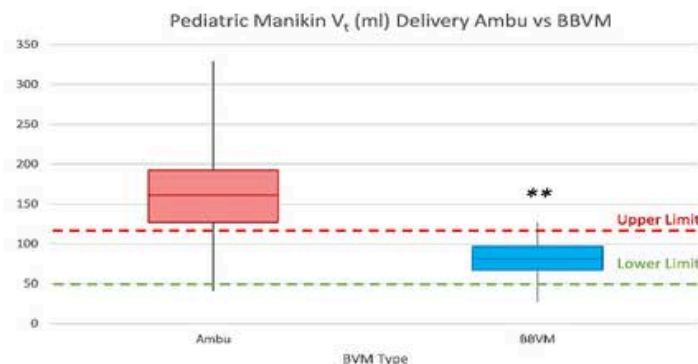

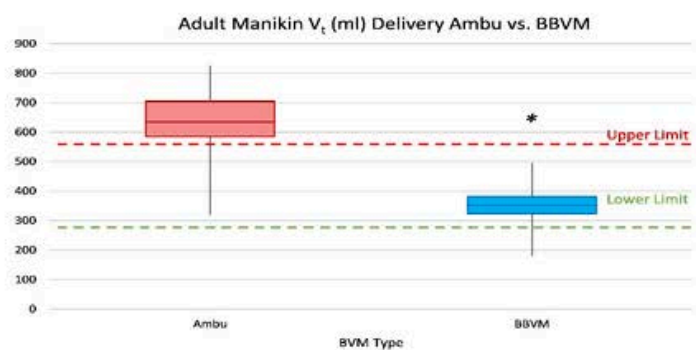

Pressure Control Dial

Accessory Ready

Advanced emergency providers were 10x more likely to give correct minute ventilations to pediatric manikin patients when using the ButterflyBVM than the Ambu Spur II.

With only a 30-second introduction to the product, emergency physicians were found to give more physiologically-appropriate tidal volumes and peak inspiratory pressures with the ButterflyBVM™ than with the Ambu Spur II.
